

# VERTIV™ HEROES OF POWER:

## Lewis Howard Latimer

### A LASTING LIGHT

Lewis was the son of parents who escaped slavery. This self-taught man worked alongside both Alexander Graham Bell and Thomas Edison.

His deep knowledge of both electrical engineering and patent work helped him to become a successful inventor and author. Latimer would publish a book in 1890 entitled *Incandescent Electric Lighting: A Practical Description of the Edison System*. He was the driving influence to perfect Edison's incandescent lighting process by developing a longer lasting filament.

**Lewis, thanks for keeping our lights on!**

The **LIEBERT® EXM™ UPS** continues our long history of innovation in critical power protection.
