

HOW THE WORLD WILL CHANGE WITH **BLOCKCHAIN**

TRANSFORMATIONAL APPLICATIONS FOR BLOCKCHAIN:

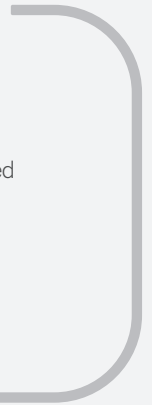

Two parties engage in a transaction - possibly of money or data

A 'block' is created digitally and transmitted to every party in the network for approval

The transaction is validated or placed into a queue

The transaction is then completed

If approved, the block is then added into a chain, providing a transparent record of transactions

Providing citizens with traceable identity to beat **human trafficking**

Supply chains are more **transparent** and avoid fraud and waste

Economic empowerment of the marginalised thanks to **trusted land** and **property registries**

Transparent government thanks to Blockchain enabling **validation of records**

Financial **transactions** fare made more trustworthy and transparent
